End-to-end development of a real-time network monitoring system, from data pipelines and APIs to authentication and Single-Page Application.

Interests

Open-source, self-hosting, programming languages, software distribution, CI/CD, i18n.

Education

University of São Paulo

Jan. 2014—Dec. 2018

Bachelor's in Computer Engineering

Colégio Santa Cruz

Jan. 2007—Dec. 2013

Middle School & High School

Personal projects

now

https://now.dev.br

A command runner built in Rust, based on Nix. It allows for local and/or distributed builds of reproducible scripts, with control over how and where they should run.

Duper

https://duper.dev.br

A format that serves as a modern extension to JSON. Includes comments, temporal values, bytes, identifiers, and more. Written in Rust and available in Python, Node.JS, WebAssembly, and C#.

Sandhole

https://sandhole.com.br

Reverse proxy written in Rust, based on OpenSSH, in order to expose services behind CG-NAT. Supports HTTP and HTTPS, WebSockets, TCP, and SSH, as well as blocklists, HTTP/2, rate-limiting, admin panel via SSH and more.
